

Hi Friend,

You may have heard me invoke the common African proverb, “If you want to go fast, go alone. If you want to go far, go together” before, and for good reason: when I think of the many people and organizations who have contributed to the Exemplars in Global Health program, I am struck by the power of our collective commitment to improve health and wellbeing for all. With research in over 15 topics across 28 countries, Exemplars in Global Health relies on our growing partner community to help us identify and learn from positive outlier countries. Our collaborative work, aligning with SDG 17 focused on global partnership development, enables us to share bright spots with peer countries that may be able to use these insights to improve their own health systems.

As global leaders soon gather for UNGA 79, I’m continuing to find ways to learn from my global community— and I hope you do too. To begin, I welcome you to read our latest Q&As with three Exemplars in Global Health partners.

Best,  
**Niranjan Bose, PhD**  
Managing Director, Health and Life Sciences

**Conversations with Exemplars News**

**[Amanda McClelland on how the world dodged six epidemics in 2023](#)**

Resolve to Save Lives' senior vice president discusses findings from the latest edition of the Epidemics That Didn't Happen report and what the world learned from fast-acting health systems. [Read the Q&A here.](#)

**[Dr. Arun Balajee on the importance of early warning systems](#)**

The Global Fund expert talks about the importance of event-based surveillance and early warning systems to detect and control disease outbreaks. [Read the Q&A here.](#)

**[Dr. Abdisalan Noor on leveraging data to eliminate malaria](#)**

The former head of the Strategic Information for Response Unit at the WHO's Global Malaria Programme shares how to leverage granular data to make better decisions, strengthen health systems broadly, and eliminate malaria. [Read the Q&A here.](#)
